

ACTIVEHDD

Safeguard your PC with ActiveHDD

ACTIVEHDD Basic

What does it do ?

ActiveHDD Range of recovery cards are a powerful solution to protect your hard disk drive from software disasters caused by virus, Spyware, Adware, tampering, accidental destruction, abnormal shutdown, Windows blue screen conditions, registry errors, etc.

It also protects CMOS settings.

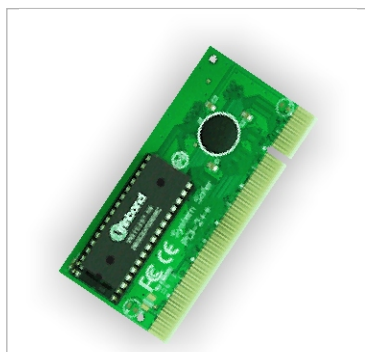

Just insert ActiveHDD Pci Card into your computer and specify the partition(s) you want to protect so your computer will be able to run in perfect condition without technical difficulties.

In case any problems do occur, your system can be recovered by just restarting the PC.

Ideal for Cyber Cafe's, offices, schools, universities and any computer operated by many users.

How does it work ?

ActiveHDD creates a hidden storage location in your Hard Drive. And all modifications are saved in this location. By restarting the PC the hidden location is deleted and the system reverts back to its working condition.

ACTIVEHDD Pro

Specifications	ActiveHDD Basic	ActiveHDD Pro
Operation System Support	DOS / WIN 95 / 98 / ME / NT / 2000 / XP/2003	DOS / WIN 95 / 98 / ME / NT / 2000 / XP/2003
